KITCHENAID DIVISION

**HOBART**

TROY, OHIO 45374

FORM 12110B (Rev. 4-79) (Supds. F. 12110A, 5-78)

## Instructions For Operation and Care of MODEL K5-A KITCHENAID MIXER

### MOTOR:

The K5-A Mixer is equipped with a built-in motor for operation on alternating current of the **VOLTAGE SPECIFIED** on the band (3). It should not be used on current that varies more than 10% from the voltage specified.

In normal service, the temperature of the motor will rise, especially if mixer is operated for some time. However, this is a perfectly normal condition and will not harm the mixer.

The commutator brushes can be removed by unscrewing the synthetic caps (2) on each side of the mixer. When the brushes have worn down until the square part is approximately an eighth of an inch long, they should be replaced.

### LUBRICATION:

Motor bearings are self-lubricating and should require no further attention under normal use as a household appliance.

Apply a little grease to the slideways (9) once in a while, with the tip of your finger, to keep the bowl lift working smoothly.

### SPEEDS:

To start the motor, move the switch control lever (1) forward. The speed at which the mixer operates is governed by the position to which the lever is moved. The highest speed is at No. 10. To stop the motor, push the switch control lever back to "OFF".

### BOWL:

To put on the bowl (6), first locate the back bowl pin (10) in the notch at the back of the bowl support (11), then snap the side ears down over the locating pins (7).

### BOWL LIFT:

Before a beater can be put on or taken off, the bowl must be lowered. To lower, move the bowl-lift handle (12) back as shown by the arrow in the illustration.

Lowering also makes the bowl more accessible for filling.

To mash potatoes or to cream butter, start bowl in its lower position and raise it slowly to working position as the materials break up.

### MIXING ATTACHMENTS:

Three mixing attachments are regularly furnished. The flat beater (8) is used for the heaviest mixing, such as mashing potatoes, creaming butter, mixing biscuit dough and the heavier batters. The wire whip (4) should be used only for light mixing, such as beating eggs and whipping cream. The dough hook (5) is used to knead and mix yeast bread.

Consult the KitchenAid Recipe Book, which contains suggestions for selecting the proper beater for each mixing job at hand and also mentions the speed to use, and the time required.

### ATTACHMENTS:

Some attachments available for this model

- Food Grinder
- Juice Extractor
- Vegetable Slicer and Shredder
- Ice Cream Freezer (4 Qt.)
- Colander and Sieve
- Can Opener
- Grain Mill
- Buffing Wheel

The motor should not be running when

### ORDERING PARTS FOR MODEL K5-A

Any replacement part cataloged in this book can be quickly located by the following procedure:

- (1) Find the picture of the desired part in the illustration on a left-hand page. The parts are grouped for easy identification, and each has an index number so that it can be quickly found in the list on the right-hand page adjoining.

**EXAMPLE:** If you wish one of the little rubber cylinders under the mixer, you will find it in the illustration on page 4, with the index number 19. Referring to page 5, it will be seen that the corresponding Part Number is C-240211, and the name is "Foot-Rubber".

- (2) When writing your order, give both the Part Number and the Name. Do not give the Index number.
